

Diamon-Fusion® is a patented protective hydrophobic coating for glass and other silica surfaces that has important ecological benefits when applied to windows of marine vessels. Since salt water corrosion of glass is a major, labour intensive problem, the Diamon-Fusion® ultra-water repellent coating will create a smoother surface to which hard salt water cannot stick. Thus, Diamon-Fusion® requires no harsh chemical cleaners that pollute our oceans. Diamon-Fusion® also improves visibility, reaction time, and night-time glare by 30% for safer and cleaner waters. Diamon-Fusion® has been applied to the USS *Halsey Destroyer*, the rescue and salvage ship, USNS *Grasp*, and has been used by the California Harbor Patrol and Princess Cruise lines. www.DFIolutions.com
